Nordic Edge One Time Password Server 3 secures access to applications and systems with strong, multi-factor authentication. Are you looking for a solution which is easy to install, cost-effective and is used by millions of users worldwide? Then the Nordic Edge One Time Password Server (OTP Server) is the solution for you.

-  *Multiple One Time Password Delivery Methods*
-  *Quick, Fast and Easy to Install and Administrate*
-  *Designed to Run in Your Enterprise Environment*

The product is easily integrated into the existing environment and comes with full support for most remote access solutions, making installation quick and easy - you'll be up and running in no time.

Do what other customers around the planet have already done, install the Nordic Edge One Time Password Server and start benefiting from all the advantages today.

The OTP Server has ready-made integrations with most remote access products in the market ranging from VPN's, Webservers and thin client solutions and, with the Java or .NET API's, customers can quickly integrate any application or service with the OTP Server. The OTP Server is a part of the Nordic Edge Versatile Authentication Services (VAS) offering.

Whether you are a small company or a Fortune 500 organization, you will find that the Nordic Edge One Time Password Server is the best choice for you. If you are still unsure of the power, versatility and effectiveness of the One Time Password Server, download an evaluation copy from our download section and try it out yourself!

 **EASY**

 **COST-EFFECTIVE**

 **SUPERIOR PERFORMANCE**

 **RELIABLE**

"...Nordic Edge's One Time Password-solution with SMS to cell phones is secure, easy to deploy internationally and our customers understand it..."

- Göran Johansson, IT Coordinator  
at Gunnebo Troax Initiatives AB

"...Since introduction of the solution we have reduced our operational cost, have happier end users, and at the same time retained the level of security requested..."

- Martin Lindberg, IT Procurement  
Manager, Eniro Initiatives AB

"...The system has been up and running without a single failure since we brought it online in 2008..."

- Jonas Lindemann, Senior system  
manager, Lunds Universitet

## Experience the versatility, flexibility and power of the One-Time Password Server

- The solution is designed to run in YOUR enterprise environment. It runs on most operating systems, supports most remote access solutions and integrates with most user stores.
- Although very flexible, the OTP Server is still easy to use - both for the administrator and the end-users.

## With solutions from Nordic Edge, you can feel safe and assured you've made the right decision

- Nordic Edge is specialized in Identity and Access Management with a deep knowledge and experience in directories and strong authentication. This guarantees the best functionality for all needs around these areas.
- Reference from customers in all sectors and sizes guarantees functional products. The products scales from 1 to 1,000,000+ users.
- All products are developed in-house which minimizes lead time for developing new features and functions.
- The Nordic Edge Support is available (depending on support level purchased) from normal daytime to 7x24x365.
- Customer satisfaction is always our top priority.

## Have more than one delivery method available at the same time

- All delivery methods for authentication can be enabled at the same time. The policy will either enforce users to use a specific method, or give users a choice between different authentication methods.

## Multiple delivery methods for the price of one

- You can have your One Time Passwords sent as an SMS, an email or a chat message
- One Time Passwords generated on your mobile device (or desktop/laptop) using Pledge
- Automated Key Enrollment for Pledge which means no administrative involvement needed in enrolling tokens to end-users. This allows an extremely fast roll-out of tokens to companies of any size; perfect for organizations looking for a fast deployment or with a high number of external, temporary users.
- Full support for any OATH based token
- Integrated support for hardware tokens with full automated key enrollment
- Full support for any token using an authentication server supporting RADIUS
- One Time Passwords generated in advance, called "pre-fetch". They can be printed or sent via email, chat, SMS. Great to have when you have limited access to GSM network, or while out traveling.

**nordic edge**

The Nordic Edge offering includes two-factor authentication, role based delegated user administration and provisioning. Nordic Edge was founded 2001 in Sweden and has customers in more than 25 countries.
